

Froli™ Sleep System

The Froli Sleep System delivers sleeping comfort with a supportive spring base under the sleeping surface. This system's foundation is individual plastic spring pads. Each spring is made from a durable hi-tech thermoplastic elastomer in which you can easily adjust the firmness for optimal comfort. To prevent condensation forming the mattress is slightly elevated from the bed deck to allow air to circulate. The Froli Sleep System provides durability, memory, and precise flexing under load all to help you get a good night's sleep in your nuCamp camper.
